Simple Universal Lighting Timer

 \bigoplus

User Manual

Mode switch

- When switched to the position closest to the power input, the device is in Normal Mode.
- When switched to the position furthest from the power input, the device is in Auto Mode.

Normal Mode

- Lights turn on and off manually by pressing the button.
- · No timers are enabled.

Auto Mode

- Lights turn on and off manually by pressing the button, and are also controlled by timers.
- Press the button to turn on the lights. This will be the time of day that the lights always turn on every day from here on out.
- By default the lights will remain on for 6 hours before they turn off automatically.
- Manually turn the lights off early by pressing the button. This will update the timers such that the lights always turn off at this time of day.
- Note, if the lights are turned off within the first 30 minutes of turning on, no changes to timers will be made.
- Update the timers at any time by turning the lights on or off manually.

To reset to default values

- 1. Turn the lights off if they are on by pressing the button.
- 2. If not already, flip the mode switch to Auto Mode.
- 3. Flip the mode switch to Normal Mode briefly, and then back to Auto Mode.
- Default settings have been restored. Follow the procedures in the previous sections to configure.

Notes

- It is recommended to turn off lights by pressing the button before switching between Normal Mode and Auto Mode.
- In the event of power loss, the backup power will be able to keep the timers running for a couple hours, even though the lights cannot turn on. This means that the device does not need to be reconfigured after a brief power outage, or if the device is relocated.
